

# CamScanner tutorial

This tutorial was done for CamScanner on Android.

Install the application from your phone's app store.

Open the application

Click on the menu button

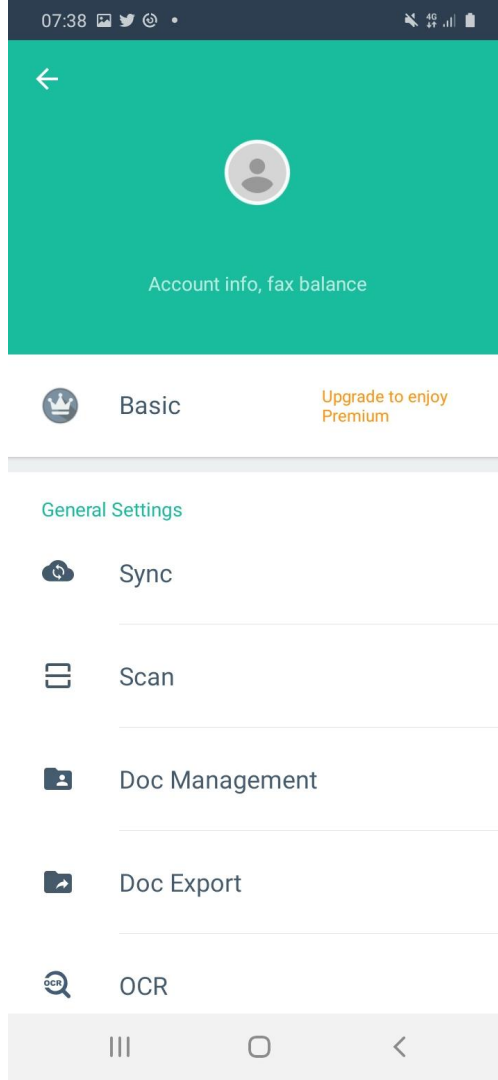

Let's first add a default prefix to pdf names.

This will make your life easier when you're scanning the problems!

Go to Settings

Doc Management

Display Settings

Self-defined Name Template  
2020-05-07

Display Page Details

Always Show Tag Bar

Storage Settings

Save to  
Phone memory (5.48 GB left)

Memory Card1 /storage/emulated/0/CamScanner/

Self-defined Name Template

Enter your student code as the prefix for the filename, followed by an underscore or “\_” as shown.

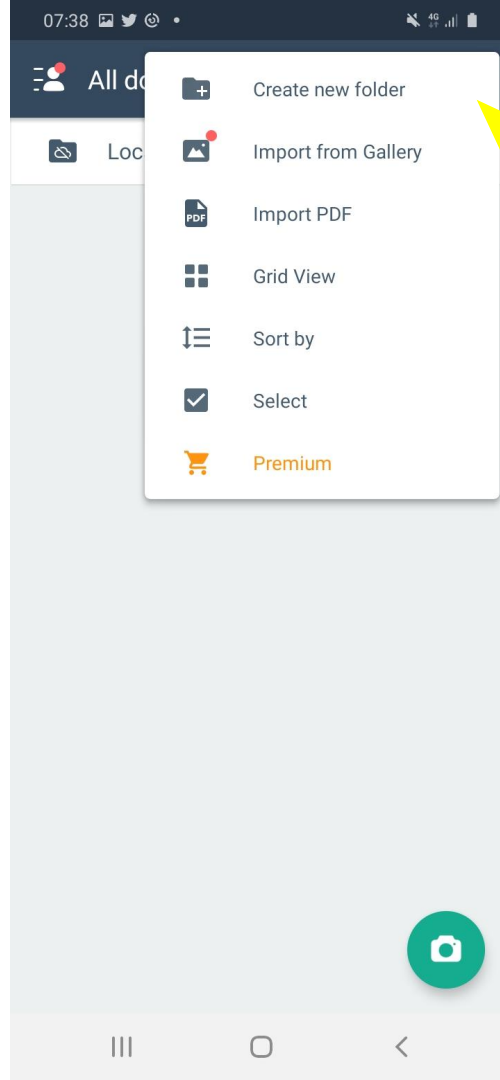

When you're done, hit save.

Navigate back to main window

Hit the menu button

Create new folder

Name the folder something like NBPhO.

When you're ready to start scanning your solutions, hit the folder name to open it.

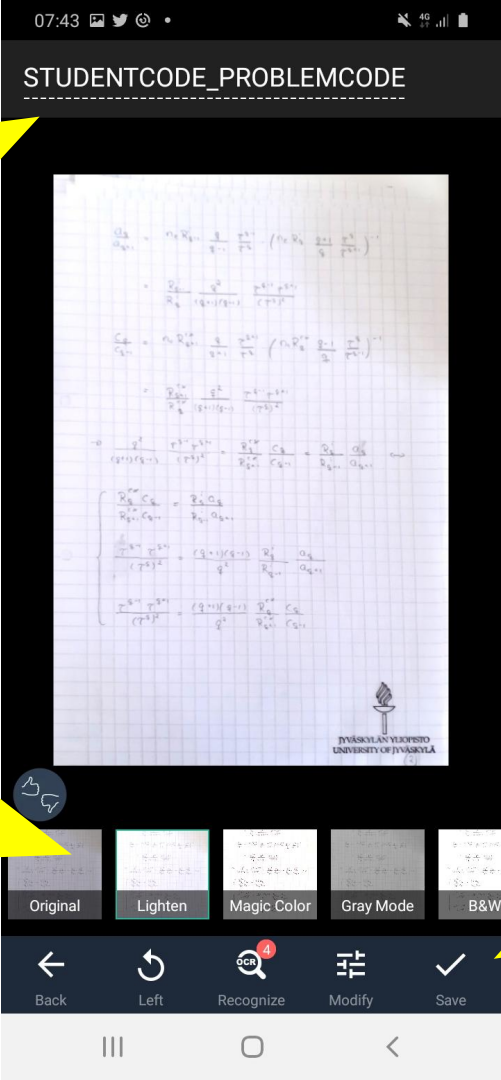

Then use the camera button to start scanning!

After taking a picture of your solution, the application performs an automatic cropping.

It usually works, but sometimes you have to help it by dragging the white circles to the correct positions.

Hit Next when you're done

Add the problem code to the document name

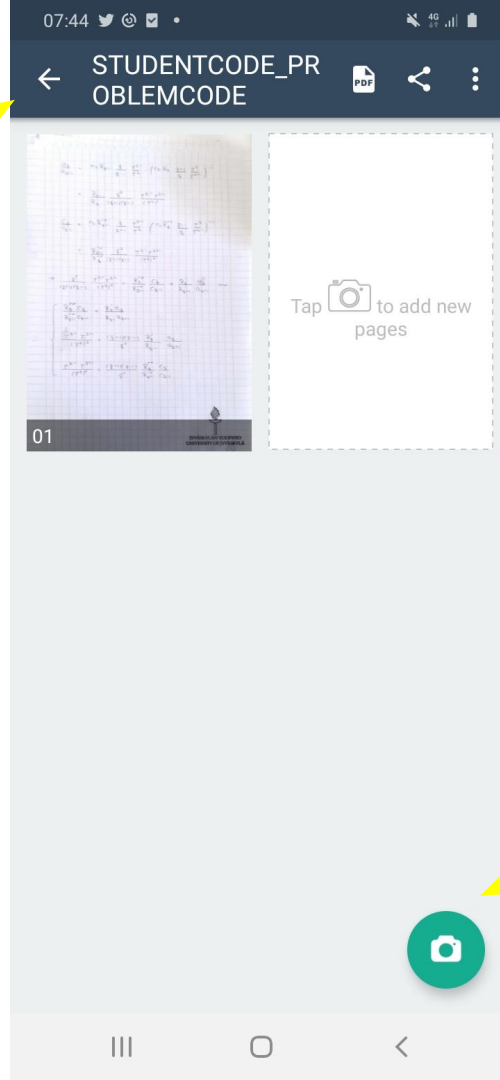

Choose a filter that makes the document easy to read.

Lighten usually works well.

Please note that the sheet in the picture is NOT an example solution! Your solution paper must contain your student code as well as the problem code!

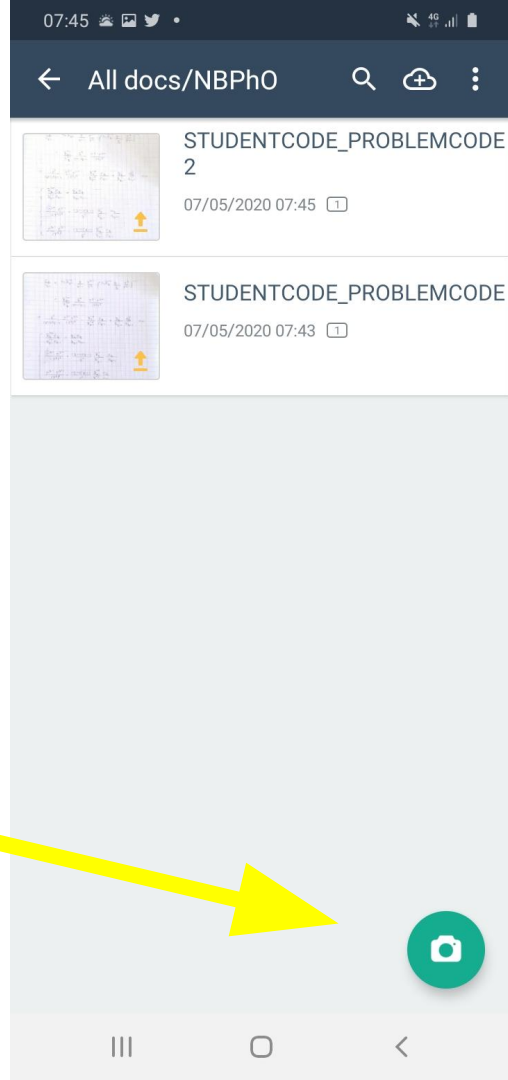

When you're done, hit Save

When you're done hit the arrow to return to the folder.

If there are multiple pages to your solution, keep adding sheets to the document.

Keep adding solutions by hitting the camera button in the folder view.

When you're finished scanning, go to the menu and choose Select.

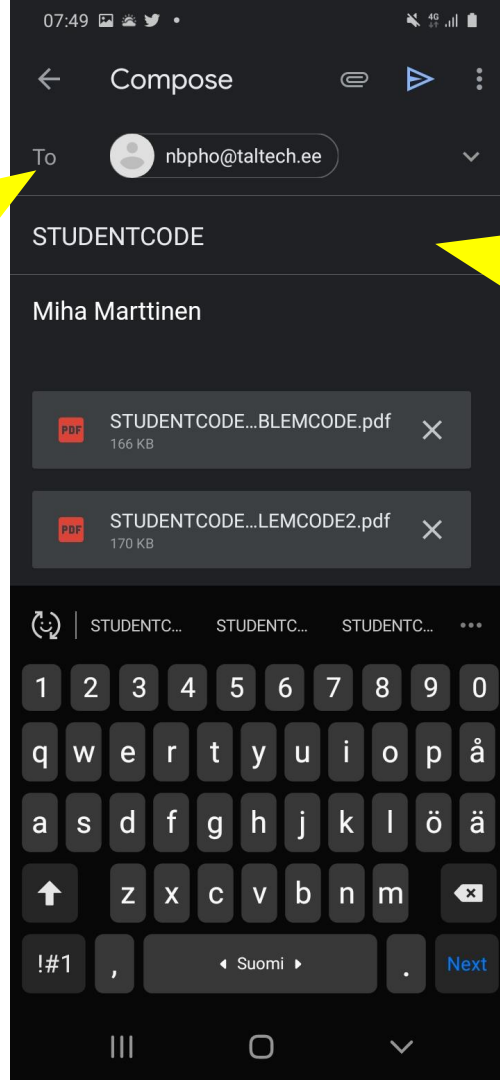

Select all solutions

Click Share to share all selected solutions.

A menu will open. Choose your email application to send the solutions via email.

Send the solutions to  
nbpho@taltech.ee

Include your student  
code in the email title.

Also write your name  
in the message.

Then just send the  
message, and you're  
done!
